- Taiwan CDC is now offering free OraQuick HIV kits at four lesbian, gay, bisexual and transgender resource centers. The latest initiative in its campaign for greater participation in HIV counseling and testing.
- People who think they may have contracted HIV can now perform a quick, free home test to determine their status.
- The test has a 99 percent sensitivity/specificity and is easily carried out. simply to collect oral fluid by swabbing upper and lower gums with the device provided in the kit and insert it into a test tube for 20 to 30 minutes to obtain the results.
- a positive result from oral fluid testing is preliminary and the person's status would have to be confirmed by additional testing.
